

Notarization Built Into Your Platform

An embedded notary
infrastructure that **never**
leaves your product

Credentialed notaries anytime, anywhere

OneNotary's nationwide network of 50,000+ credentialed notaries are anchored by a dedicated, professionally trained in-house pool that we employ, operate, and supervise directly. Every notary a signer meets is held to a rigorous standard: always-on, always vetted background-checked, anti-fraud and deepfake trained, and continuously audited.

50,000+ Credentialed notaries
nationwide

99.7%+ Session completion rate

99.99% Platform uptime,
SLA-backed

How It Works

The defining feature of Notary On-Demand is how little the process changes. The notary simply appears at the moment the signer needs one. The signer in your session's platform likely won't even know they're using OneNotary. They think they're using your platform, or the bank, credit union, or insurer whose document they're signing. That's the point.

THE ECONOMICS OF EMBEDDING THE NOTARIZATION STEP

The mechanics matter, but the reason to embed notarization into your platform is economic. Four things happen to a platform's business when notarization runs natively inside it.

01 Unit economics move an order of magnitude

A standard e-signature envelope prices at a few dollars. A notarized envelope prices at ~\$25 or more. That's a 10x+ step in revenue per transaction, attached to the agreements customers value most. Notarization is ARPU expansion on volume that is already flowing through the product.

02 Stickiness where e-signature is commoditizing

Switching e-signature vendors gets easier every year. Switching the platform that holds your notarized, admissible, and audit-trailed agreements does not. Embedded notarization moves a platform from a replaceable signature tool to the system of record.

03 The most valuable documents, not just the simple ones

The agreements that require a credentialed human step, like home sales, POAs, loan modifications, trusts, and some beneficiary changes, are the highest-stakes documents a customer executes. Completing them in-platform and within your digital workflow moves the platform up the value stack.

04 A real answer for regulated buyers

Finance, banking, insurance, and government buyers evaluate agreement platforms on whether the regulated steps can actually finish inside the product. Native notarization converts a disqualifying gap into a differentiator in the deals with the longest contracts and the highest expansion revenue.

BUILT AS AN EMBEDDED NOTARY INFRASTRUCTURE

BUILT FOR DEVELOPERS, NOT JUST SIGNERS

A REST API covers the full session lifecycle, with webhooks returning the signed PDF, session ID, completion timestamp, IDV/KBA status, A/V recording URL, journal hash, and X.509 metadata straight to your system of record.

We can set up a sandbox in minutes, and we scope the integration to your workflow, not a template.

SECURITY AND COMPLIANCE, INHERITED BY EVERY SESSION

OneNotary is SOC 2 Type II attested under the AICPA's Trust Services Criteria and is ISO/IEC 27001:2022 certified. Its remote online notarization operations comply with MISMO standards for the mortgage and real estate industry.

The platform runs on 99.99% uptime with service-level guarantees, encrypted transactions, and secure document storage.

Every session inherits this standard

- ★ **Encrypted, recorded audio-video** for the full notarial session
- ★ **Tamper-evident digital seal** and **a signed certificate of completion**
- ★ **Full audit trail** including session ID, timestamp, notary journal, and recording retained for every transaction

     

WHY PLATFORMS EMBED ONENOTARY

The market leader test. Docusign evaluated the notarization landscape and chose OneNotary as the engine behind its flagship notary product. The diligence bar a platform of that scale applies, such as security review, workforce audit, SLA scrutiny, and state-by-state compliance, is the same bar every subsequent partner inherits the benefit of.

Always-on, always vetted. A 24/7 on-demand notary pool that's background-checked, credential-verified, and trained to a high service standard interfaces directly with your customers under your brand. No coverage gaps, and no drop in quality between a weekday afternoon session and a Sunday night one.

The convenience, security, cost savings, and time efficiencies are real. You can't compare it.

— Cara McCarthy, Consumer Lending
Operations Supervisor

We don't compete with our partners.

OneNotary has no end-customer sales motion into a partner's base and no destination product a partner's customers get routed to. Some RON providers now compete with the very platforms that integrate them. Our position is structural. You keep the customer, and we run the human validation layer. The partnership is the product.

Margin-accretive, not margin-diluting.

Notarization is priced to add to your bottom line. The economics are structured so this is a revenue line you're glad to add, not a low-margin feature you have to justify internally.

READY TO EMBED NOTARIZATION IN YOUR PRODUCT?

Let's talk about how we can make your notarization hurdles a problem of the past.
